

## Stainless steel for liquid drainage

Inoxsystem® has steadily increased the range of activities as a well established company in the steel processing sector over the years.

The company, based in Vicenza, in the north of Italy, provides a range of high quality stainless steel products, that included drainage system for water and liquids in general for the most hygienically demanding industries such as food industry, the building industry as well as swimming pools, shower rooms, wineries, etc.

*In additional to the wide range of standard models, each mode can be customize upon specific needs*

### Drainage channels

Our drainage channels are entirely made of AISI 304 and AISI 316 stainless steel. They have a slope and they are usually covered with grates (available in different measures) or slotted surface (their standard measure is 20 mm but they can be reduced to 8 mm). The shape and the length of each drain can be modified upon the customer request.

### FLOOR DRAINS

Our floor drains meet the highest quality solutions and are entirely made of AISI 304 or AISI 316 stainless steel, a material with a high degree of rust resistance.

The different models have features such as:

- Plate or grated cover
- Circular or square surface
- With or without odor trap
- Double odor trap
- Blind plate cover with O-Ring gasket
- Filter basket

In addition to drainage systems, the company also offers a wide range of stainless steel components and accessories, such as inspection covers, corner and angle guards, edge protectors and other items that can be adapted to different needs.
